Task	Time (estimate)	Time (spent)	Time (left)	30	21	22	23	24	25	26	27	28	29	30	31	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28
Research on repository	1	1	0		1																																																																				
Set up repository (create & link to users)	1	1	0		1																																																																					
Set up server (giving users access)	4	4	0	2	1																																																																					
Research on MySQL vs. SQlite	2	2	0			1																																																																			
Design Database Structure	10	10	0		1		4			2		3																																																											
Peer-review & Rework of Database Structure	3	3	0				1					2																																																											
Create database (tables) – might be multiple tasks	10	10	0						1			2																																																											
Peer-review & rework database tables	4	4	0									2																																																											
Create 'Log in' page	4	4	0						2																																																														
Implement querying from database for log in process	3	3	0																																																																						
Implement adding user to database for 'Log In' process (session ID table)	5	5	0																																																																						
Implement PHP script for successful login (add to session ID table)	5	5	0																																																																						
Implement PHP script for unsuccessful login (error message)	4	4	0																																																																						
Implement PHP script for checking valid session ID	8	8	0						2																																																														
Test for successful log in	2	2	0																																																																						
Test for failure (correct/incorrect user, correct/incorrect password, invalid characters	5	5	0																																																																						
Create 'Main Menu' page	4	4	0								1																																																												
Implement PHP script for 'Create account' process	2	2	1.5										0.5																																																											
Create 'Create account' page for manager and system admin	2	2	1										1																																																											
Implement adding user to database for 'Create account' process	3	3	2										1																																																										
Implement PHP script for successful addition of user	2	2	1.5										0.5																																																											
Implement PHP script for unsuccessful addition of user	2	2	1.5										0.5																																																											
Test for success of 'create account' process	2	2	0																																																																						
Test for failure (empty string, username exists) of 'create account' process	2	2	0																																																																						
Implement updating to database for log out process (remove from session ID table)	3	3	0																																																																						
Implement PHP script for successful log out	2	2	0																																																																						
Test for success of log out	2	2	0																																																																						
Test proper operation of session timeout	2	2	0																																																																						
Implement PHP script for 'View Personal Information' process	2	2	0																																																																						
Implement querying from database for 'View Personal Information' process	2	2	0																																																																						
Test for success of view personal information	2	2	0
